

DESIGNER FAN COLLECTION

Distinctive materials meet
high-performance design.

Beacon
LIGHTING

Great design shouldn't stop at lighting. This collection brings the same level of attention to detail to one of the hardest-working pieces in the home – the ceiling fan.

Designed in Australia, each range has been developed with as much attention given to appearance as performance. Solid timber, travertine, alabaster and woven rattan bring a richness not often seen in ceiling fans, creating pieces that contribute to the overall design of a space, and not just its comfort.

Contents

- 04 Line
- 06 Riviera
- 08 Osprey
- 10 Vine
- 12 Caelid
- 14 Abyss
- 16 Valerian
- 18 Basilica
- 20 Cessna
- 22 Louisville

Line fan in white

Line fan in black

Line fan in koa

Line

Minimal in appearance but highly engineered, Line strips away unnecessary detail in favour of a slim profile and gently curved blades. Its simplicity makes it particularly suited to modern interiors.

LucciAR

Riviera

Designed as a ceiling-mounted fan, Riviera's blades transition seamlessly into the body, creating a continuous design that reads as a single piece rather than separate components.

Osprey

Osprey was designed to remove hard edges from the equation. Soft curves run through the motor housing, blades and integrated diffuser, creating a fan with a gentle, rounded silhouette. The result is a design that softens the ceiling line and looks balanced from every angle.

LucciAR

Vine fan in whitewash

Vine fan in bronze and walnut

Vine

Vine combines woven rattan detailing with timber blades, bringing natural texture to the ceiling. Available in a range of timber-inspired finishes, it suits coastal, organic and contemporary interiors while offering a fresh take on a familiar material.

Vine fan in natural

Caelid large fan in black

Caelid fan in oil-rubbed bronze and koa

Caelid fan in white

Caelid

Caelid is defined by its scale. Available in sizes up to 2.5 metres, it pairs oversized solid timber blades with lighting. Every detail has been carefully considered, resulting in a fan with real presence and a strong architectural feel.

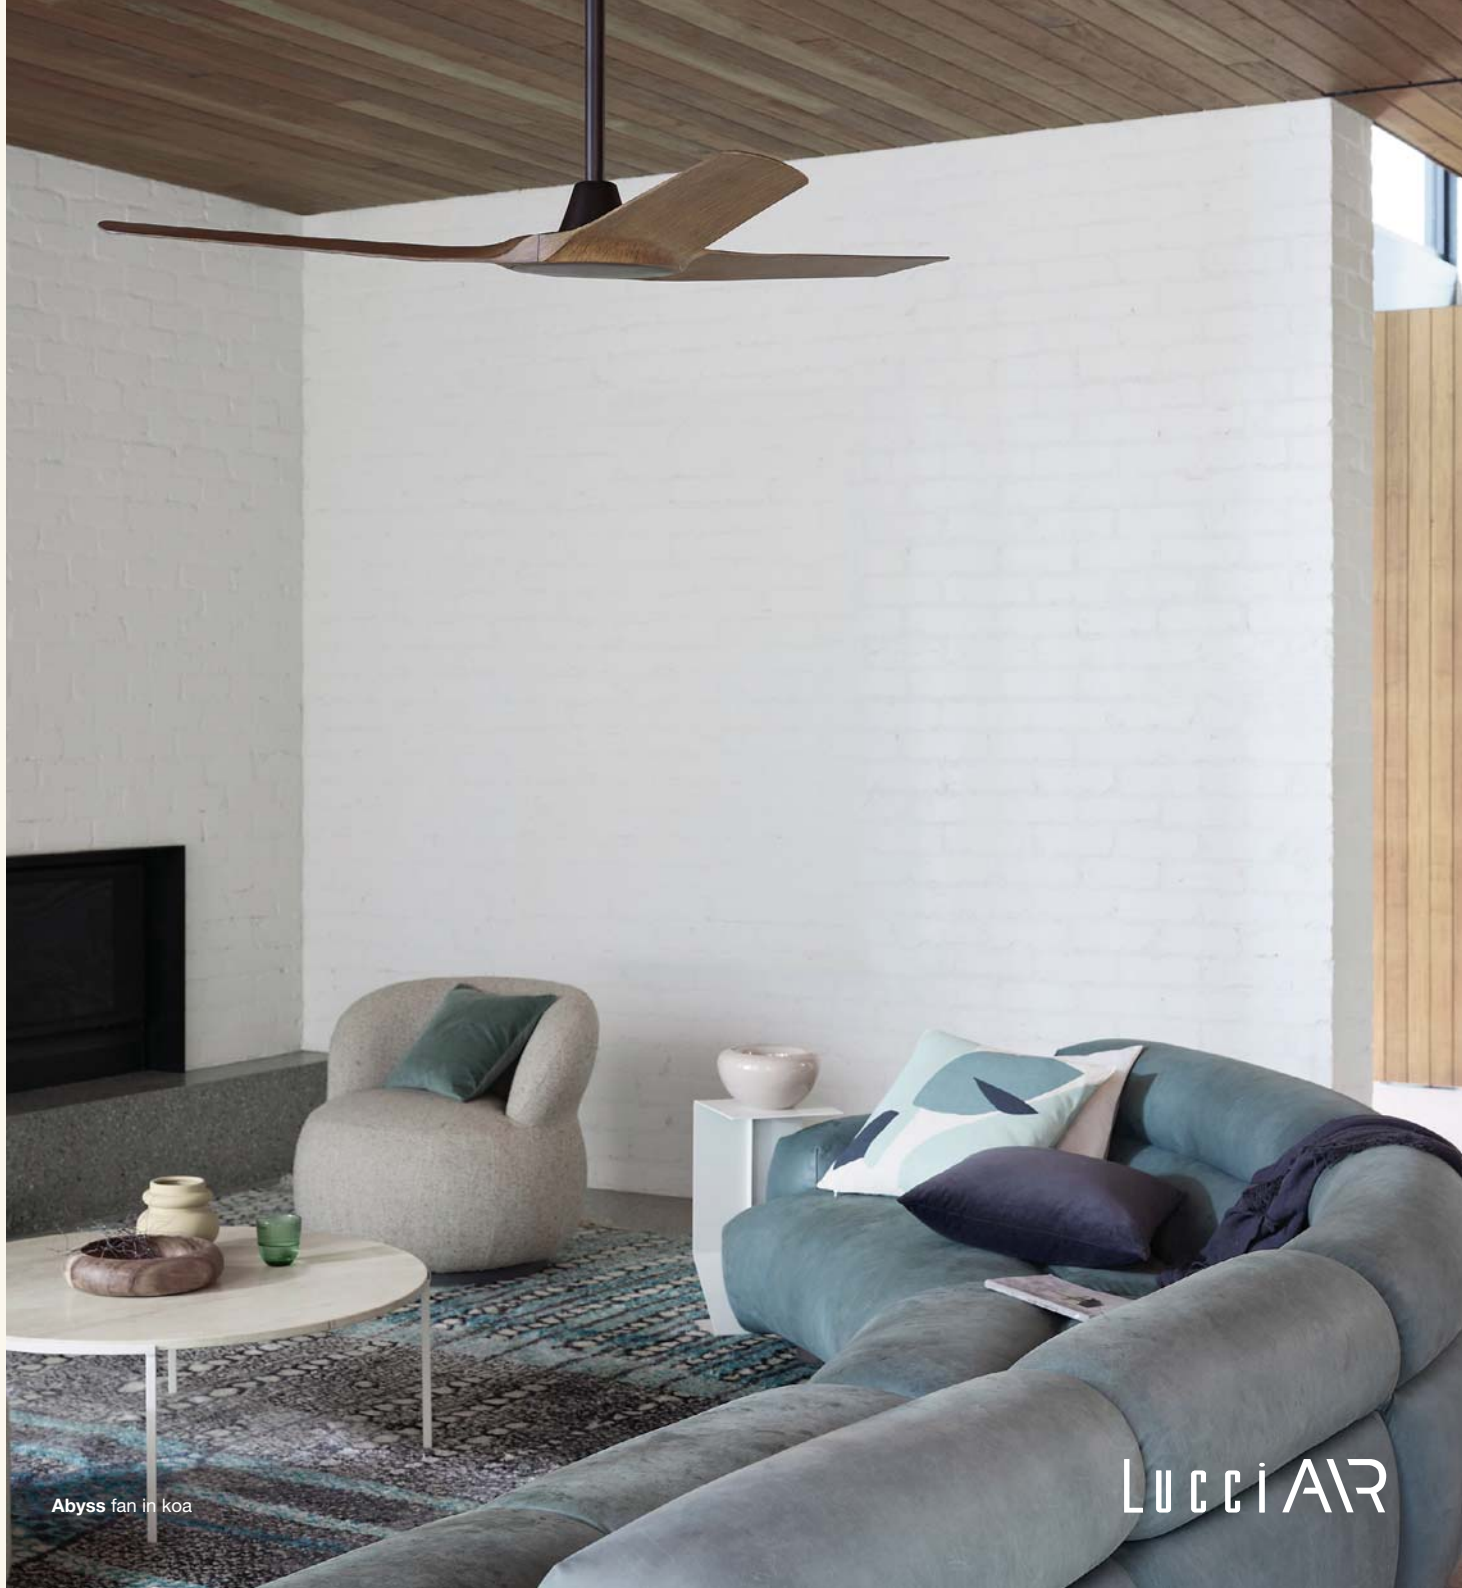

Abyss fan in black

Abyss fan in white

Abyss

Abyss was designed for demanding Australian coastal conditions without the bulk often associated with high-performance outdoor fans. A powerful slim motor allows both the housing and blades to be kept remarkably streamlined, giving the fan its clean, modern profile. Engineered to an IP66 rating.

Abyss fan in koa

LUCCIAR

Valerian

Spanish alabaster is the heart of Valerian, paired with brass detailing and walnut timber blades. Thicker than standard and finished with a rounded tip, the blades were carefully developed to complement the quality of the alabaster, resulting in one of the most distinctive designs in our collection.

Valerian fan in brass

Basilica fan in brass

Basilica fan in white

Basilica fan in bronze

Basilica

Basilica takes inspiration from traditional ceiling fans, refining familiar details for modern homes. Timber blades, clean metal detailing and a slim integrated light create a brighter, more contemporary look. From a distance, it reads as a classic ceiling fan, but a closer look reveals a design shaped by thoughtful, modern updates.

Cessna fan in nickel

Cessna fan in white

Cessna

Inspired by the popularity of circular pendant lighting, Cessna features timber blades within a striking halo ring. Combining the function of a fan and a light, it's particularly well suited to dining areas and living spaces where both aesthetics and performance matter.

Cessna fan in brass

Louisville

Louisville draws inspiration from industrial architecture, combining exposed bracket detailing with richly grained timber blades. The contrast between structural metalwork and natural materials gives the design a distinctive character.
